

The Ultra Balustrade Handrail forms part of the Channelfix Balustrade System. It can also be used as a retrofit to any frameless glass balustrade using 12mm or 15mm glass.

A handrail fitted to a frameless glass balustrade provides added safety and protects the edge of the glass.

Ultra Balustrade Handrail provides a slim profile on elevation for minimal impact on your view, and provides a comfortable, flat surface to lean on.

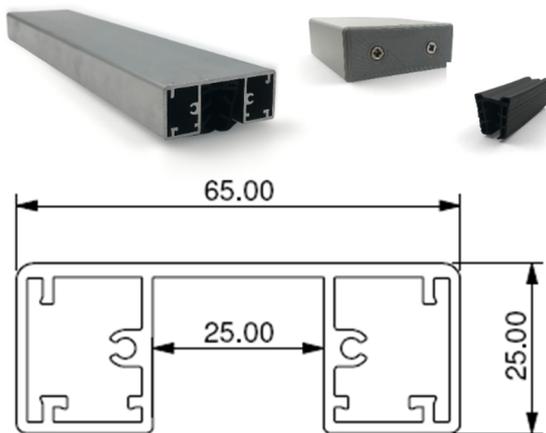

COMPLETE YOUR BALUSTRADE WITH THE EASY TO INSTALL ULTRA BALUSTRADE HANDRAIL

Ultra Balustrade Handrail is extruded from 6063T aluminium, and is readily available in 7250mm lengths in mill finish as well as selected standard colours.

It can easily be cut to the required size, and powder coated to match your balustrade channel, aluminium windows and doors, and other hardware.

Ultra Balustrade Handrail is sold with a gasket that can accommodate 12mm and 15mm glass.

Corner connectors and end caps finish off the installation for a neat and secure fit.

ADVANTAGES OF THE ULTRA BALUSTRADE HANDRAIL

- Easy installation
- Minimal impact on your view due to slim profile
- Provides added safety to a frameless glass balustrade
- Protects the edge of the glass
- Provides a flat surface to lean on
- Quality manufactured in South Africa
- Competitively priced
