

Ultra Trimline flush pull handles are specifically made for use on narrower profiles, and are suitable for aluminium or timber sliding doors and windows and will perfectly complement a sleek and minimalist look.

A flush pull handle is recessed into the door, providing a neat, well finished appearance. When powder coated in the same colour as your product they have minimal visual impact.

Ultra Trimline flush pull handles come in two different shapes, both soft touch to minimize pressure on the fingertips.

SLIM FLUSH PULL HANDLES, CUSTOM POWDER COATED AND INSTALLED WITH ADHESIVE

Ultra Trimline flush pull handles are manufactured using 6063T6 aluminium alloy. They are CNC machined and then hand finished to provide a quality appearance.

Each handle is powder coated in the desired colour, individually bagged and packed in boxes of 20 for your convenience.

Ultra Trimline flush pull handles are 35mm wide, 150mm high and have a recess depth of 12mm.

Handles are fixed to the door using the pre-applied adhesive tape. The absence of a fixing screw and the handles' high resistance to corrosion make Ultra Trimline flush pull handles perfect for coastal areas.

Technical drawings, cut out dimensions and installation diagrams are available on request.

ADVANTAGES OF ULTRA TRIMLINE FLUSH PULLS:

- Narrower profile to suit narrow door stiles
- Competitively priced
- Quality CNC machining
- Manufactured from corrosion resistant materials
- Powder coated to desired colour
- Soft touch
- Install using pre-applied adhesive

PRIMER

This specially formulated primer is designed to enhance adhesion, ensuring a secure and long-lasting bond between our aluminium flush pull handles and the surfaces they are applied to. We strongly recommend the use of our primer with each installation to ensure optimal adhesion. Free with each box of 20 flush pulls or sold separately.
