

The UltraSystems Aluminium Door Stopper is a premium stopping solution designed for aluminium sliding and hinged doors. Manufactured from solid 6063 T6 aluminium and CNC machined for precision, it delivers exceptional strength and reliable performance in both residential and commercial installations.

Designed with installers in mind, the stopper features a dual fixing system that allows easy positioning during installation and secure permanent fixing. Once installed, all screws are hidden by a black rubber bumper, creating a clean and professional finish that integrates seamlessly with the aluminium door frame.

## THE ULTIMATE ALUMINIUM DOOR STOPPER - ENGINEERED FOR RELIABILITY AND BUILT TO LAST

The UltraSystems Door Stopper is manufactured from solid 6063 T6 aluminium, providing excellent durability and resistance to repeated impact. Each stopper is CNC machined to ensure consistent quality, precise fitment, and a premium finish.

Impact is absorbed by a durable black rubber bumper insert, which protects both the door and frame while providing long service life.

The stopper features a pre-applied high bond adhesive backing which allows the installer to easily position the stopper exactly where required. Once positioned, it is permanently secured with countersunk stainless steel screws, ensuring a strong and reliable installation.

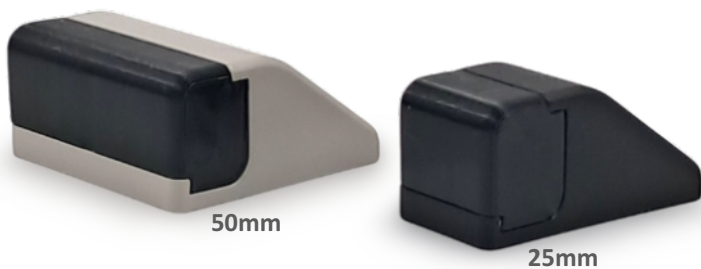

Two standard size options are available: 25mm & 50mm. The 25mm stopper features two fixing points and is ideal for sliding or hinged aluminium doors, while the 50mm stopper incorporates three fixing points and is designed for heavier sliding doors or higher traffic installations.

For installations where higher impact loads are expected, an optional anti-shift locating pin can be installed into the aluminium door frame. This prevents the stopper from shifting under repeated heavy impacts.

The aluminium stopper body can be finished to match most aluminium door systems, including standard powder coating colours, custom powder coating finishes, and specialised hard anodised or ceramic coated finishes, while the bumper insert is supplied in black.

Their exceptional resistance to corrosion makes Ultra door stopper perfect for coastal areas.

Technical drawings, dimensions and installation videos are available on request.

### ADVANTAGES OF ULTRA DOOR STOPPER:

- Solid 6063 T6 aluminium
- Precision CNC machining
- A variety of powder coating colours ensures a seamless match with the door frame
- High corrosion resistance for long lasting use
- Hidden fixings create a clean architectural appearance
- Dual fixing system allows easy positioning during installation
- Rubber bumper absorbs impact and protects door and frame
- Multiple fixings keep the stopper secure under repeated impact
